Lawrenceville, GA 30044

Dear Sam:

Thank you for your donation of ThermaCote® and for you and Tommy Sharp actually coming to Puerto Rico and applying ThermaCote® to the entire envelope of our Solar House: **CASH** (Caribbean Affordable Solar House). After just one coat, the students felt a tremendous difference in temperature between the interior and the hot and humid environment outside our building. We can indisputably say that ThermaCote® works!

As construction quickly comes to an end, and throughout the process, we have continued to feel the incredible difference ThermaCote® makes regarding the heat transfer to the interior of our building which in this tropical climate is truly remarkable. We will soon ship our Casa Solar (Solar House), to Washington, DC for the Department of Energy's Solar Decathlon 2009 Competition beginning October 8th.

I know that the application of ThermaCote® will be one of the biggest assets our house will have, and ThermaCote® will be one of the major reasons we will win this competition. Thank you again and we'll see you in Washington!

Sincerely,

Sonia M. Miranda Palacios, AIA, LEED AP
